

# Help clients succeed in information security and compliance programs

Deura Information Security Consulting + Cobalt deliver comprehensive information security and compliance solutions to businesses of all sizes

## Cyber Security

DISC is dedicated to empowering companies through streamlining & automating infosec management systems & processes. Our solutions are focused on client needs & are designed to help automate ISMS & security operations.

## Consulting

DISC has extensive InfoSec & consulting experience across a range of industries & technologies. While focusing on data security & privacy, DISC can assist you in selecting, designing & implementing the right solution to reach your cybersecurity, risk & privacy goals.

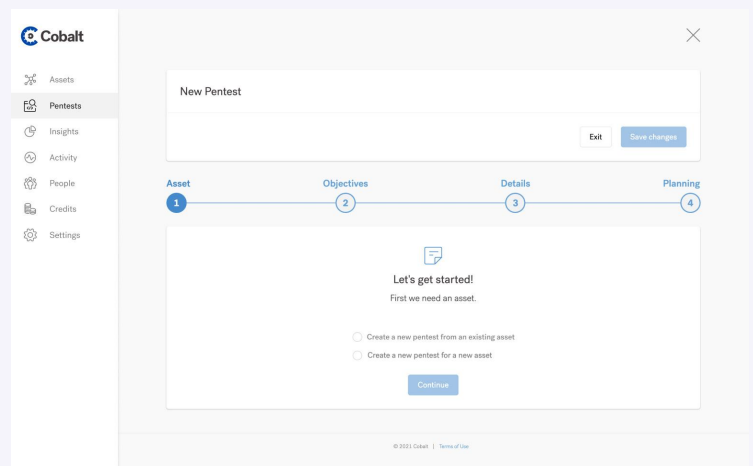

## vCISO

From InfoSec, privacy, data security, cloud security, loss mitigation, & information assurance, we bring insights from our experience & research to our consulting services to drive everlasting results of culture change.

## Pentests are *required* for SOC 2 or ISO 27001 audits, and *recommended* to improve and maintain security posture

Choose a security consultant that knows the ins-and-outs of compliance standards. DISC+Cobalt offer the best in class services to achieve your security goals.

# Modernize Pentests with Cobalt's On Demand, Dynamic, and Collaborative Platform

- 1 Job Scoping and Skill Matching**

Talk to Cobalt's experienced security team about your concerns. Cobalt will review your security needs and requirements to ensure the best security test possible. For each test, Cobalt will assign a team with skills matched to your application stack.
- 2 Manual Testing and OWASP Coverage**

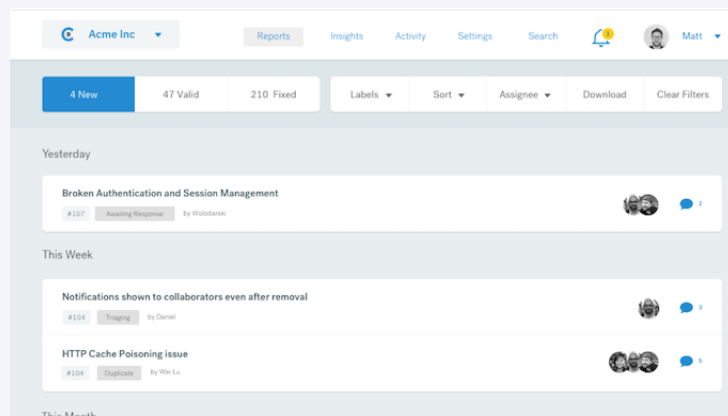

Cobalt's pentesters dive into intensive testing of the URLs within your scope. They ensure coverage of OWASP top 10 and apply logical thinking to find the vulnerabilities scanners can't find. Findings are reported real time on the platform.
- 3 Summary and Findings**

At the end of the pentest all findings are assessed and validated on impact and likelihood by the lead pentester. On top of the individual findings (which are great for your developers), you also receive a beautiful summary report to share.
- 4 Fixing, Re-test, and Verification**

After the test you can collaborate directly with the security pentesters via Cobalt Central on fixing the vulnerabilities. Using a built-in workflow the pentesters will also do re-testing to verify your patches at no extra charge.
- 5 Pentest Rating and Pentester Rating**

To maintain the highest quality possible and continuously improve Cobalt's service, all pentests and pentesters get a quality rating. You provide a rating of the pentest and the individual pentesters get rated by their peers.
- 6 Repeat as Required**

Due to Cobalt's global talent pool and agile delivery method, Cobalt can deliver these penetration tests as frequently as you like. We will support you in building a pentest program that fits your needs and SDLC.

### Post-Test Remediation

As of the conclusion of this document, the following mitigations have been implemented for the identified vulnerabilities.

FINDING	LIKELIHOOD/IMPACT	STATE	RESOLUTION
ADxx_1	High / High	Fixed	21 Dec
ADxx_2	High / Medium	Fixed	21 Dec
ADxx_3	High / High	Fixed	21 Dec
ADxx_4	High / High	Retesting	
ADxx_5	High / High	Fixed	21 Dec
ADxx_6	High / Medium	Fixed	21 Dec
ADxx_7	High / High	Fixed	21 Dec
ADxx_8	High / High	Retesting	
ADxx_9	High / High	Not fixed	
ADxx_10	High / Medium	Not fixed	
ADxx_11	Medium / Medium	Not fixed	
ADxx_12	Low / Low	Not fixed
